

AX-10 ARAI Motorcycle Visor Insert

Printer variations may cause differences to actual measurements. Please verify that your printed outline is the same as the indicated dimensions above .

- 1) Print .pdf and cut to the outside edge of the black line.
- 2) With your helmet faceshield down and fully closed, center the insert print on the outside surface of the faceshield. Align the print within the perimeter of the helmet portal so it fits within the opening.

 *The AX-10 ARAI is not compatible with all helmets and faceshields, specifically the HJC RPS-10, and Shark Evoline helmets.*
